<b>11553</b>	Implement Ipay88 re-query function to ensure connection are able to made with Ipay88.

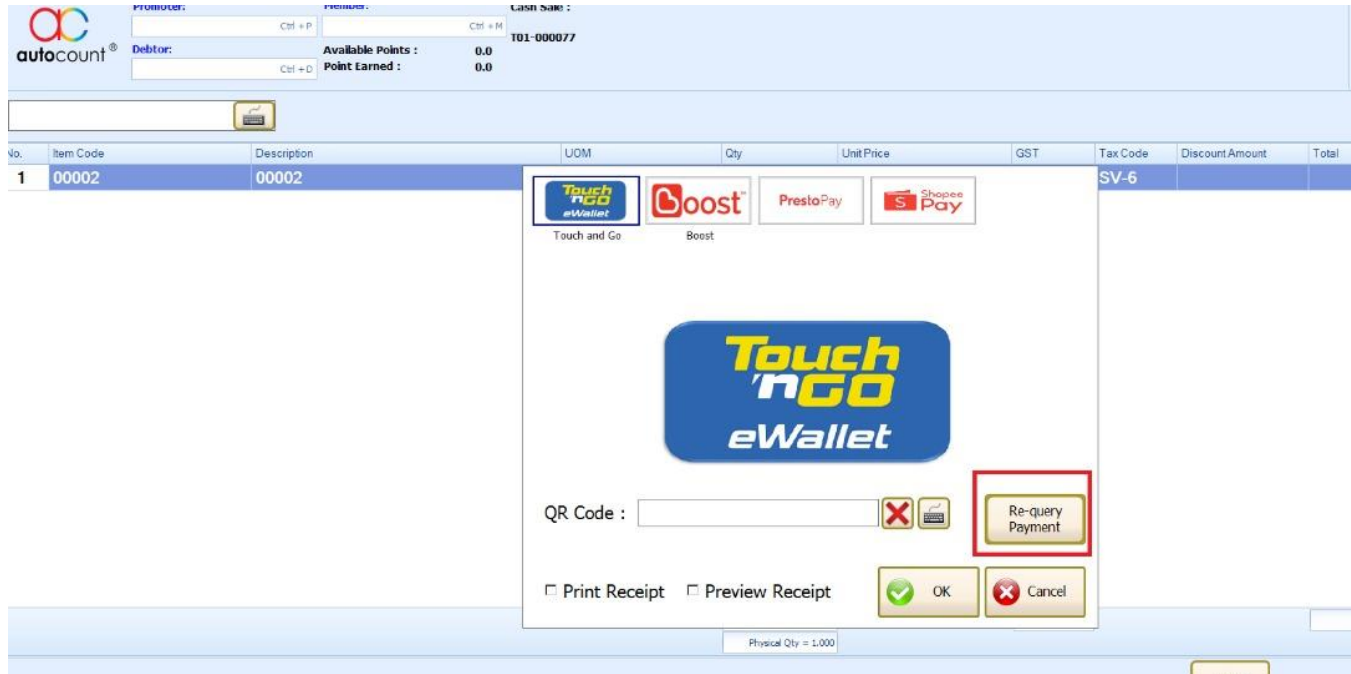

*Document Prepared by Jacky*

*Last Modified 27<sup>th</sup> December 2021*

## Highlights of Changes in 3.1.14.55

### ID: 11553 Add Ipay88 re-query function.

We have received some feedback that due to connectivity issue, user is having issue regarding Ipay88 ewallet payment issue which is sometimes AutoCount not able to proceed with the transaction due to not receiving confirmation from Ipay88 and meanwhile Ipay88 already logged the transaction in. Therefore, we have added this new feature to retry the transaction if failed. The button will appear if an error had occurred during the payment process.

The screenshot shows the AutoCount POS interface during a payment process. At the top, there are fields for 'Promoter', 'Debit', 'Available Points', and 'Point Earned'. Below this is a table with columns: No., Item Code, Description, UOM, Qty, Unit Price, GST, Tax Code, Discount Amount, and Total. The first row shows '1', '00002', '00002', and 'SV-6'. A modal window for 'Touch 'n GO eWallet' is displayed in the center. It contains logos for 'Touch and Go', 'Boost', 'PrestoPay', and 'Shopee Pay'. Below the logos is a 'QR Code' field with a red 'X' icon and a 'Re-query Payment' button highlighted with a red box. At the bottom of the modal are checkboxes for 'Print Receipt' and 'Preview Receipt', and buttons for 'OK' and 'Cancel'. The 'Physical Qty = 1.000' is displayed at the bottom of the screen.
